**DETAILED ACTION**

1. Claims 1-25 are present for examination.

**EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

3. In the title:
  - a. The title has been changed to: --An apparatus and computer-recording medium for evaluation support of encryption algorithm strength--.
4. In the claims:
  - b. In claim 16, line 2, after "...program for a process", please insert -- embodied thereon--.

***Allowable Subject Matter***

5. Claims 1- 25 are allowed.
6. The following is an examiner's statement of reasons for allowance:

Applicant has defined terminology of a figure representation of an encrypted algorithm as being a pre-defined encryption algorithm specification description manner, on page 7, lines 17-20, and 15, lines 4-18 et seq.. The figure also represents a functional bock diagram, as recited at page. 16, lines 20-27. This

language does not encompass terminology in the security, encryption, or memory arts, thereby, allowing the Applicant to be their own lexicographer in defining these terms. Accordingly, a search of the prior art fails to teach or render as obvious the claimed features as a whole and of particular note are:

- c. As claimed in claims 1-15, an encryption evaluation support system having an evaluation unit, receiving figure representation of an encryption algorithm, wherein said figure representation includes a plurality of unit figures, and a point storing unit for allocating to said plurality of unit figures. The prior art does teach in general the use of graphical design and graphical programming languages, which may be utilized in the analysis of software design, thereby simplifying its complexity, see Complexity Measurement of a Graphical Programming Language, XP 000095044. Additionally, U.S. Pat. No. 6,504,929, hereinafter '929, by the same inventor, teach the use of support evaluation of cryptographic strength by an apparatus via statistical sampling of data for outputting a table or graph. However, both lack the any teachings of the use and functions of a figure as described above.
- d. As to claims 16-25, similarly, it recites the above functions as a process that is to be embodied on a computer readable recording medium. Accordingly, see above for the specifics of the examiner's reason why he indicated that claim 16-25, are allowable over the prior art.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

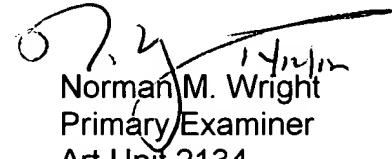

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
